

ENTERPRISE-WIDE INTEGRITY & COMPLIANCE MANAGEMENT

Identify Zero-Day Attacks, insider threats, backdoor installations, and more using Cimcor's flagship product, the CimTrak Integrity Suite. CimTrak is **the industry's most advanced real-time file and system integrity monitoring and compliance solution**. It continuously monitors physical, network, cloud, and virtual IT assets, providing detailed forensic data on all changes. CimTrak detects unauthorized changes and offers automatic remediation, enabling organizations to safeguard critical systems and data. This ensures continuous compliance and security across the enterprise while protecting against threats to vital IT infrastructure.

WHAT WE HELP WITH

Deploy CimTrak across your security stack to enhance monitoring, auditing, and change control processes.

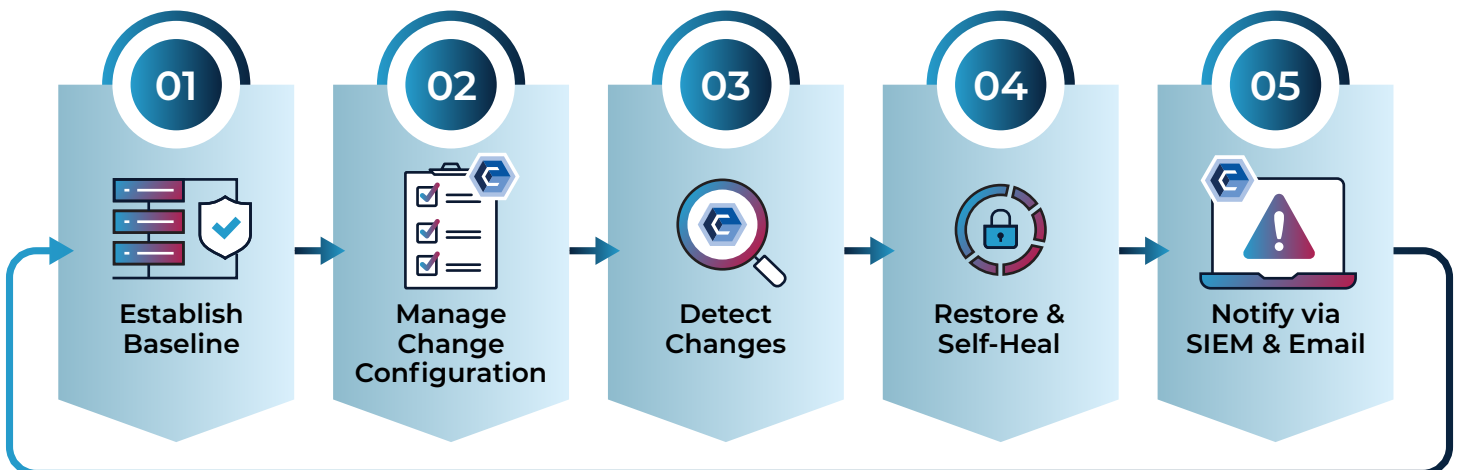

CIMTRAK FOR SECURITY

CimTrak identifies unwanted and unexpected changes by detecting changes in real-time. This unprecedented level of visibility allows it to proactively prevent cyberattacks at the source—without relying on reactive threat feeds or chasing out-of-date malware signatures—and offers automated rollback capabilities to restore systems to a trusted state.

CIMTRAK FOR COMPLIANCE

CimTrak simplifies adherence to PCI DSS, HIPAA, NIST 800-53, CMMC, and 50+ frameworks with pre-built policies and automated reporting. It leverages CIS Benchmarks and DISA STIGs to validate hardened system configurations and provides comprehensive audit logs and integrity reports for regulatory adherence.

HOW IT WORKS

CIMTRAK KEY FEATURES

REAL-TIME INTEGRITY MONITORING

Detects unauthorized changes instantly, ensuring visibility into potential threats across files, directories, configurations, databases, and network devices.

CONTINUOUS COMPLIANCE

Provides comprehensive audit logs and integrity reports to help organizations meet strict compliance mandates such as PCI DSS, HIPAA, NIST 800-53, NIST 800-171, and more.

AUTOMATED CHANGE RECONCILIATION

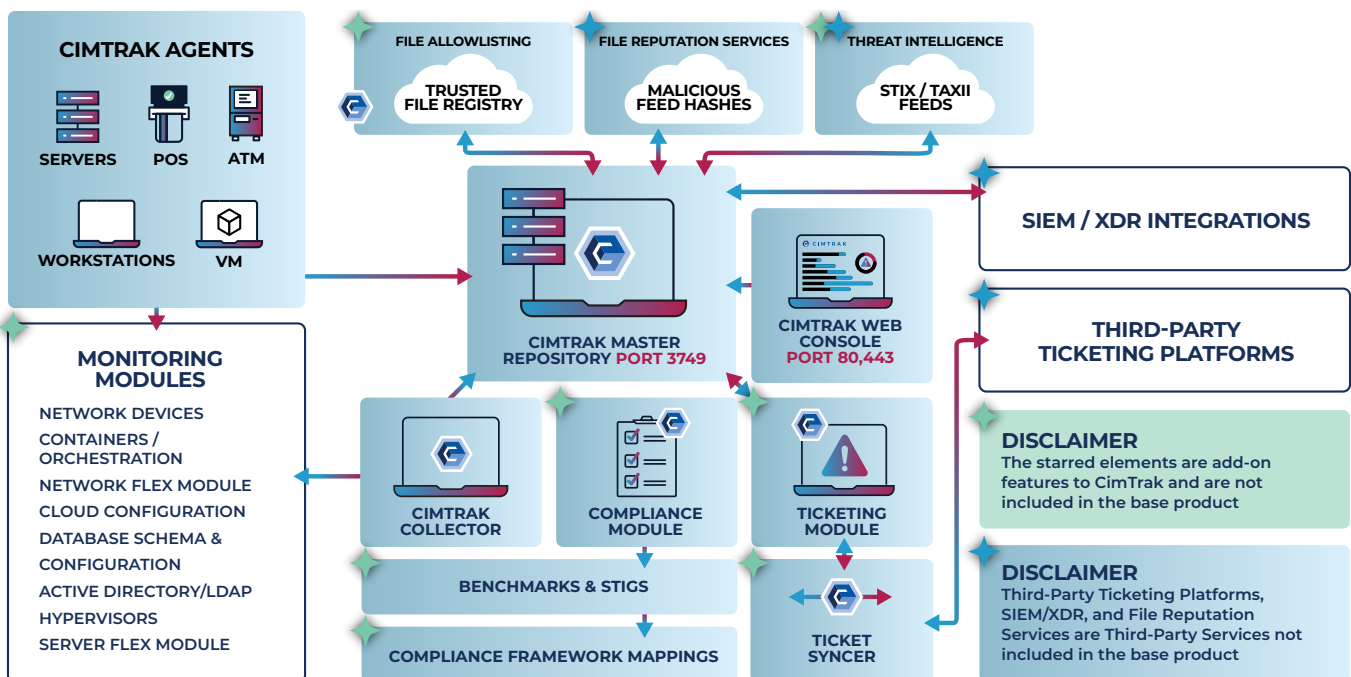

Verifies and reconciles approved changes versus unauthorized changes, reducing false positives and minimizing alert fatigue for security teams by focusing on critical changes.

SECURITY POSTURE ASSESSMENT

Automated assessment of system hardening-related configuration settings. Monitor when systems drift away from hardening standards such as CIS Benchmarks and DISA STIGs. Includes clear guidance & remediation advice for every test performed.

COMPREHENSIVE SYSTEM COVERAGE

CimTrak provides end-to-end integrity monitoring for servers, workstations, cloud environments, and network devices, ensuring seamless security across hybrid IT infrastructures.

WHY CIMTRAK?

Unlike other integrity monitoring solutions, CimTrak doesn't just detect changes—it enables real-time response and remediation, reducing attack surfaces proactively. With 24/7 monitoring and support for 50+ compliance frameworks, organizations stay protected without the burden of constant manual oversight.
